

Brief Description of the Drawings

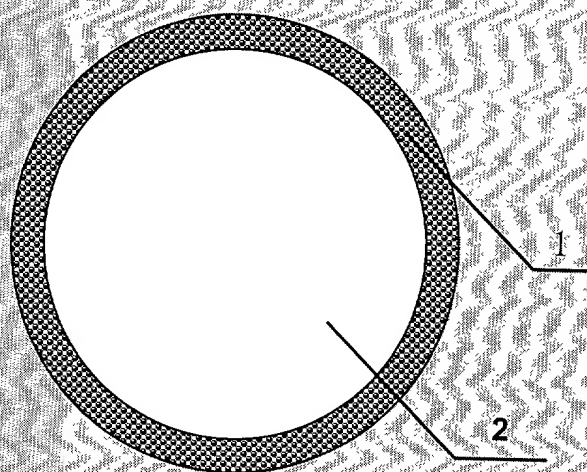

Fig. 1

Fig.1 Structure of carriers

1. The Mg-Fe-NaOH composition layer located on the outer surface of carrier
2. Pure Mg located in the center of carrier

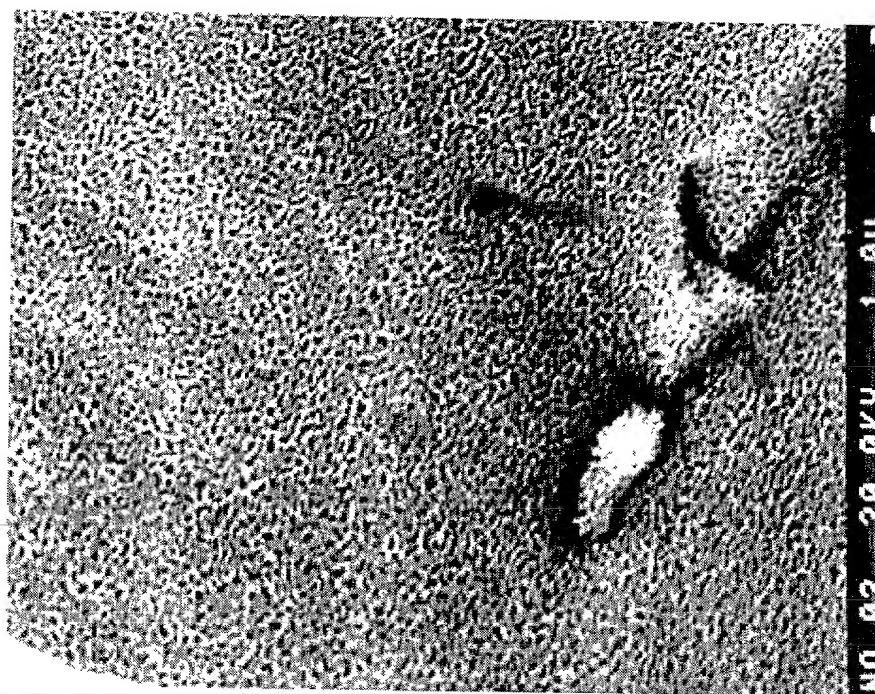

Fig. 2

Fig.2 Surface metallography characteristics of carriers by the use of EPMA (Electric Probe Micro-Analyzer)

A large, dark, textured rectangular area covering the majority of the page, with a large 'X' mark drawn across it. The texture is grainy and noisy, resembling a heavily degraded scan or a redacted document. The 'X' is drawn with two thick, dark lines that intersect in the center of the page.
